Stellarview

AI Search: Intelligent Vision, Instant Results

India's first AI-powered contextual search in traffic and security analytics.

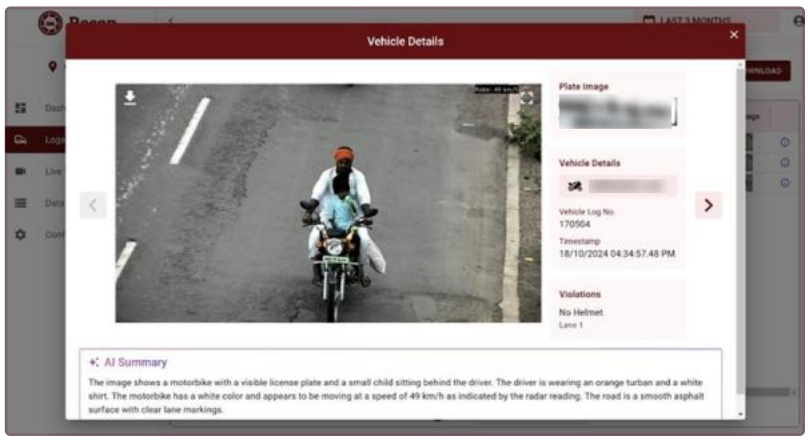

Powered by Stellarview

What is AI Search?

The AI Search Feature is an advanced search tool built on computer vision and scene understanding, empowering authorities to retrieve key visual insights from massive image datasets using simple keywords.
Whether it's a "**man in orange turban**" or the text "**Ganesh**" on a passing vehicle, AI Search feature on our Recon dashboard finds it instantly.

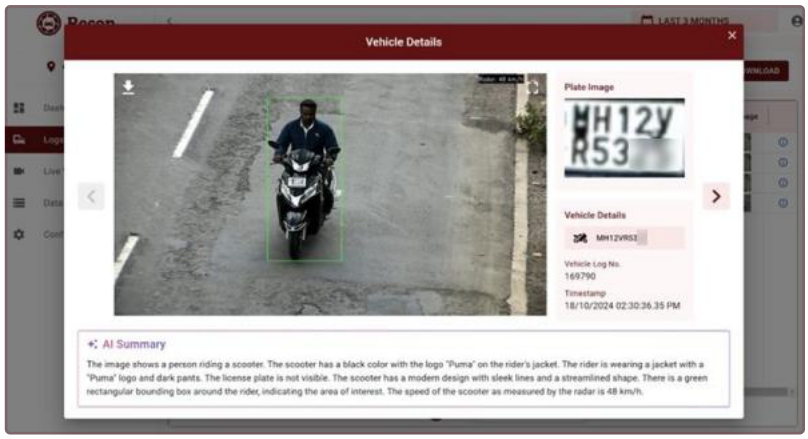

Key Features

✓ **Attribute-Based Search**
Find people or vehicles using appearance cues like "yellow face emoji," "red cap," or "orange turban."

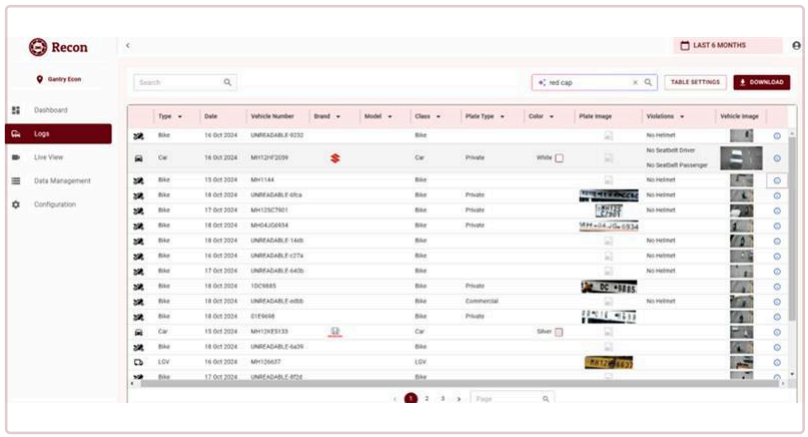

Stellarview

✓ **Text & Logo Recognition**
Identify printed words or brand logos on vehicles and signs (e.g., “PUMA” or “Autobahn Trucking”).

✓ **Real-Time Results**
Instantaneous and continuously updating search outcomes from incoming data feeds.

✓ **AI Summarization**
Every match comes with an auto-generated contextual summary to accelerate understanding.

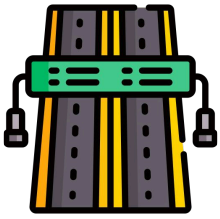

AI Summary

The image shows a person riding a scooter. The scooter has a black color with the logo "Puma" on the rider's jacket. The rider is wearing a jacket with a "Puma" logo and dark pants. The license plate is not visible. The scooter has a modern design with sleek lines and a streamlined shape. There is a green rectangular bounding box around the rider, indicating the area of interest. The speed of the scooter as measured by the radar is 48 km/h.

Use Cases

Law Enforcement & Security

Highway & Urban Surveillance

Analytics & Archival

Experience the Future of Video Intelligence

AI Search is built to transform surveillance and investigation, from passive footage to active insights.
